Subject: RE: Lake Tenkiller EFDC Modeling Update

Hi Chris,

Thanks so much for your quick response. The timeline is important. We need to brief our management if we are going to move forward with EFDC or if we take a different tack. There are lots of changes (including retirements) coming up and may pose scheduling questions.

We agree that the % anoxic volume statistic may be valuable in determining criticality of some of the profiles. We'll follow up on the issue with the contractors and compare it against the language in 785:45-5-12 f (1) (C) (ii)

Thanks again and stay tuned.

Taim.

Subject: RE: Lake Tenkiller EFDC Modeling Update

Hi Taim,

Thanks for sending this. I know you likely have various pushes on the time so how critical is the timeline? Two weeks for review would be beneficial as we have some immediate commitments which cannot be changed but is that going to push the 2-3 week meeting timeline too much?

Also, just speaking for OWRB, after a very quick glance we may request a few outputs of the %volumetric anoxia stat to determine how critical some of the profiles may or may not be. If we do, I will try and let you know ASAP. Lastly, we finally heard back from USACE regarding the latest bathymetric dataset so I will be sending you the timeline I mentioned later today.

Thanks,
Chris

Dear Technical Workgroup Members,

It's been a considerable amount of time since our last group communication. We have been actively pursuing improvements regarding the Lake Tenkiller EFDC model. After significant revisions to the lake model, the attached document represents what we can achieve with the EFDC model and calibration data for the 2005 - 2006 period. Specifically, we are sharing the profiles for temperature and dissolved oxygen at lake monitoring stations. We would appreciate your review of the attached modeled profiles and the overall statistics. Once we have had a chance to familiarize ourselves with the output, we would like to have a conference call to discuss the current model and decide on a path forward regarding Lake Tenkiller. Any decisions reached at that time will most likely impact options regarding the path forward for the watershed model as well. We hope to have a conference call in the next two to three weeks.

Thank you all for your time and patience and please stay tuned.

Sincerely,

Taim.
